Four color theorem - Wikipedia In mathematics, the four color theorem, or the four color map theorem, states that, given any separation of a plane into contiguous regions, producing a figure called a map, no more than four colors are required to color the regions of the map so that no two adjacent regions have the same color. The Four Colour Theorem : nrich.maths.org The Four Colour Conjecture was first stated just over 150 years ago, and finally proved conclusively in 1976. It is an outstanding example of how old ideas combine with new discoveries and techniques in different fields of mathematics to provide new approaches to a problem. The Four-Color Problem: Concept and Solution In 1879, A. Kempe (1845â€“1922) published a solution of the four-color problem. That is to say, he showed that any map on the sphere whatever could be colored with four colors.

Four-Color Theorem -- from Wolfram MathWorld Four-Color Theorem The four-color theorem states that any map in a plane can be colored using four-colors in such a way that regions sharing a common boundary (other than a single point) do not share the same color. The Four Color Theorem - People | School of Mathematics The Four Color Theorem This page gives a brief summary of a new proof of the Four Color Theorem and a four-coloring algorithm found by Neil Robertson , Daniel P. Sanders , Paul Seymour and Robin Thomas. Four-colour map problem | Britannica.com Four-colour map problem: Four-colour map problem, problem in topology, originally posed in the early 1850s and not solved until 1976, that required finding the minimum number of different colours required to colour a map such that no two adjacent regions (i.e., with a common boundary segment) are of the same colour.
